

PUWER

(The Provision and Use of Work Equipment Regulations) 1998

PUWER regulations apply to the safe use of any machinery or tools used at work. These regulations require users of work equipment to carry out risk assessments and provide work equipment that is suitable for its intended task and that can be used without putting persons at risk. PUWER therefore not only requires that operators of work equipment are correctly trained but also those who supervise the use of equipment. This course provides delegates with a sufficient level of theoretical knowledge and practical awareness to be able to interpret the requirements of PUWER and apply it to their own roles and organisations.

Duration

One day.

Who should attend

This course is suitable for persons who have control of work equipment, or who use, manage or supervise the use of work equipment.

Aims and objectives

To provide delegates with a clear understanding of their obligations and duties under PUWER '98.

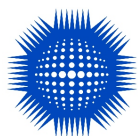

Content

- The law in brief
- To whom and when does it apply
- Suitability of work equipment
- Maintenance requirements
- Inspection requirements
- Specific risks
- Information and Instructions
- Training requirements
- CE Marking
- Dangerous parts of the machinery
- Protection against specified hazards

Certification

Certificate of attendance on successful completion of the course.

See current Course Schedule for details of dates and prices.
